# Continual Personalization for Diffusion Models

Yu-Chien Liao\*   Jr-Jen Chen\*   Chi-Pin Huang  
Ci-Siang Lin   Meng-Lin Wu   Yu-Chiang Frank Wang

# Continual Personalizaion

- Learn multiple concepts within a single model **without extra module.**
  - Capable of combining multiple concepts in a single image.
- Personalize each concept in **a sequential and never-ending manner.**
  - Being able to dynamically add new concepts without extra operation.

Input tasks

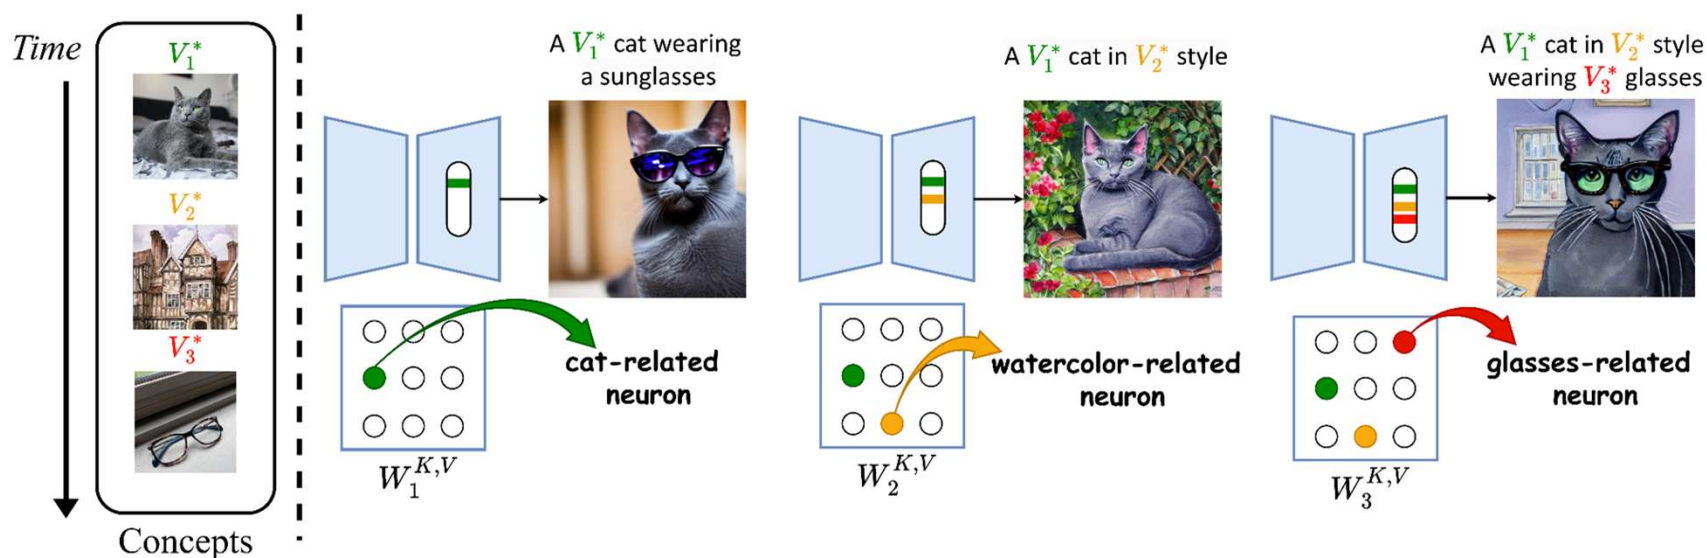

<b>&lt;new1&gt;</b>	<b>&lt;new2&gt;</b>	<b>&lt;new3&gt;</b>	<b>&lt;new4&gt;</b>	<b>&lt;new5&gt;</b>	<b>&lt;new6&gt;</b>	<b>&lt;new7&gt;</b>
						
<b>dog</b>	<b>lighthouse</b>	<b>colored pencil</b>	<b>hat</b>	<b>park</b>	<b>horse</b>	<b>dog</b>

		
<b>&lt;new2&gt;</b> lighthouse in the snow.	A <b>&lt;new6&gt;</b> horse in <b>&lt;new3&gt;</b> style	A <b>&lt;new1&gt;</b> dog wearing a <b>&lt;new4&gt;</b> hat in <b>&lt;new5&gt;</b> park in <b>&lt;new3&gt;</b> style

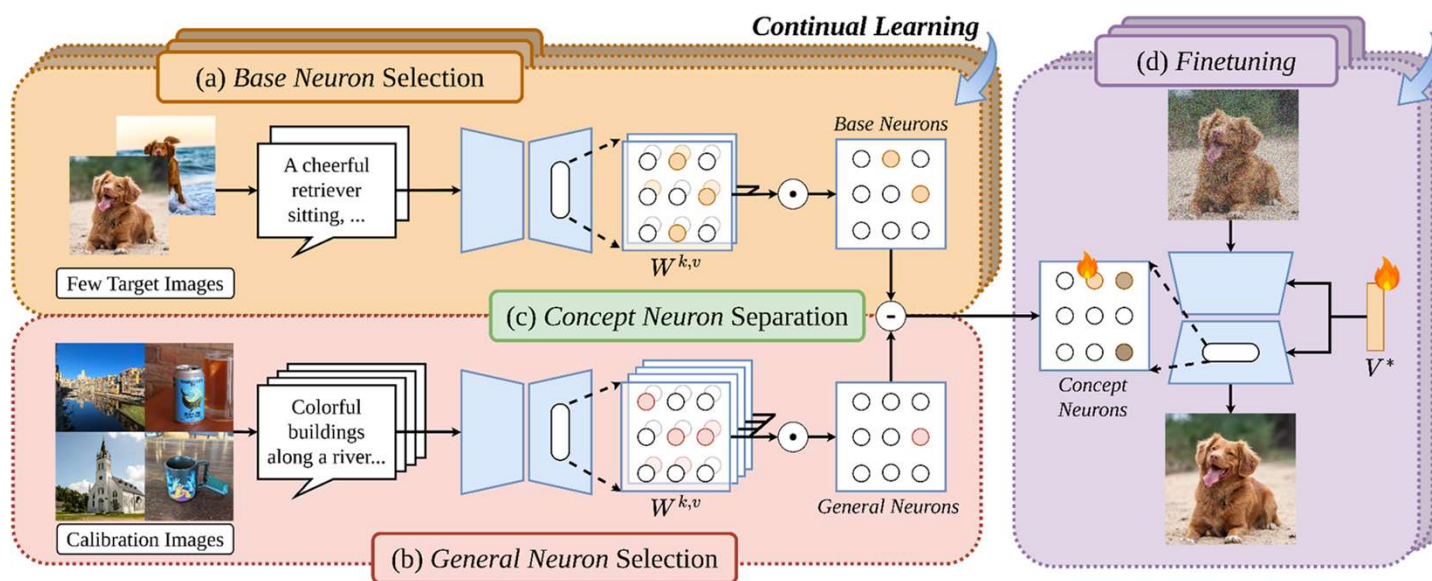

# Problem Settings

- **Find concept-related neurons** for each concept as training target.
  - We aim to find **disjoint neurons** for each concept.
- Consider several user-provided concepts (1-6 images per concept).

# Methods - Overview

- Classify neurons to different categories.
- Find **Concept neurons** by excluding **General neurons** from **Base neurons**.
  - Finetune different **Concept neurons** for different concepts to prevent forgetting.

# Methods - Scoring Each Neurons

- Tuning the specific **Key/Value neurons in CrossAttn** only.
  - Which handle the text information in diffusion model.
- Finding which neurons contribute to the generation.
  - Assign **important score** for all neurons with **Wanda**<sup>[1]</sup>.
  - Pick high-scoring neurons as **Base neurons**.

[1] A Simple and Effective Pruning Approach for Large Language Models

## Target Image Set

## Target Image Set

GPT-4o

A cheerful retriever sitting.

CrossAttn (K,V)

and

GPT-4o

A retriever relaxes in a forest, its eyes alert and tongue slightly out

CrossAttn (K,V)

and

GPT-4o

A retriever is running in the ocean.

CrossAttn (K,V)

## Target Image Set

GPT-4o

A cheerful retriever sitting.

CrossAttn (K,V)

and

CrossAttn (K,V)  
(*General neurons*  
+  
*"dog" Concept neurons*)

CrossAttn (K,V)

and

GPT-4o

A retriever is running in the ocean.

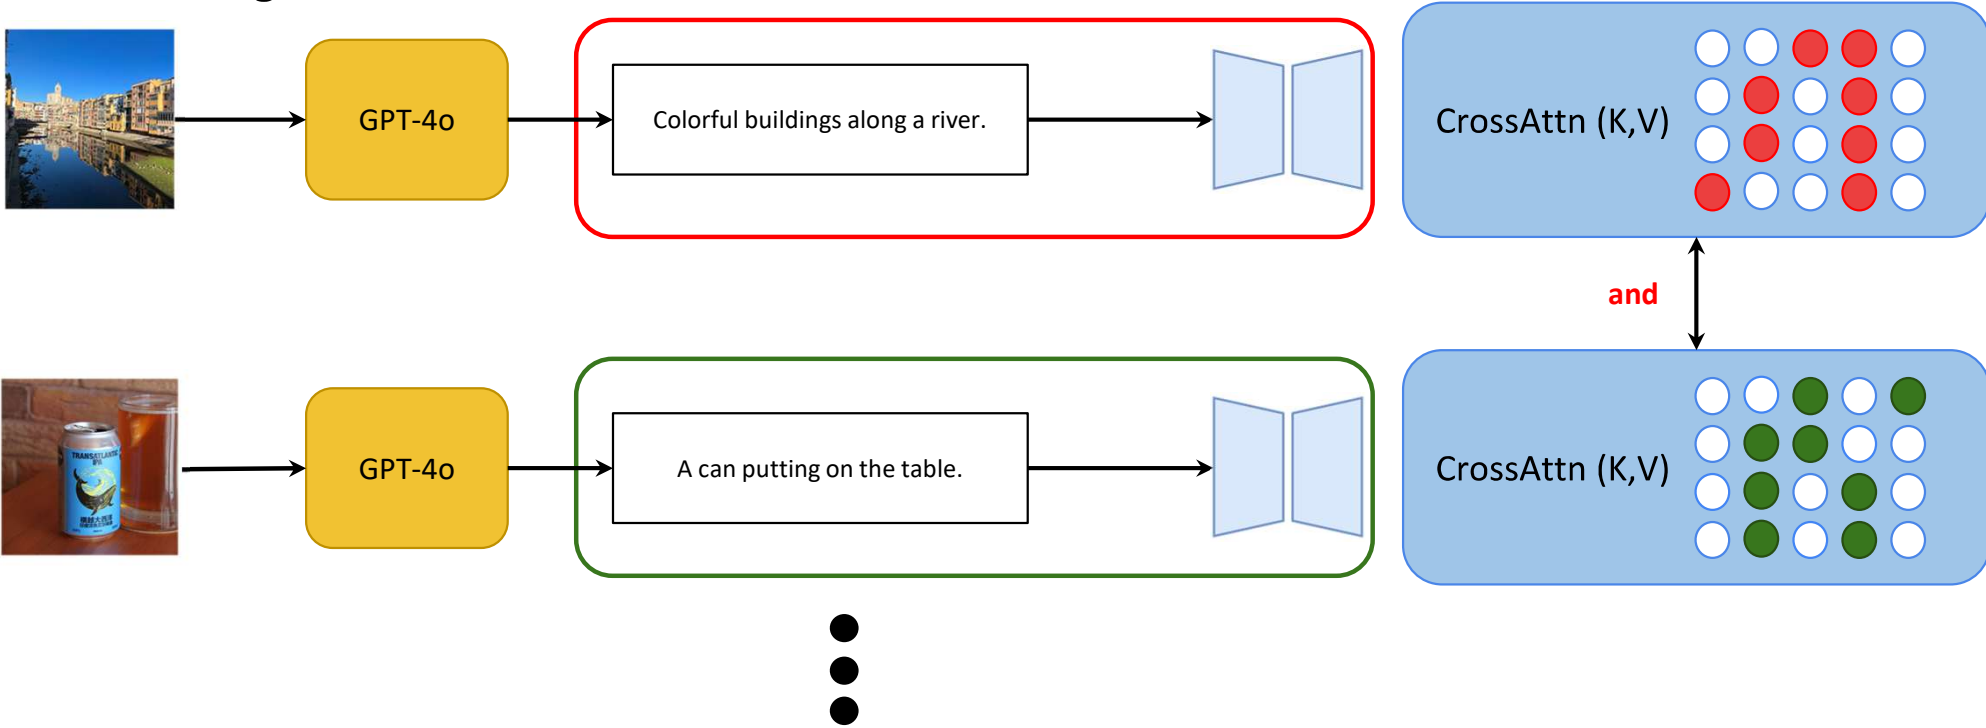

CrossAttn (K,V)

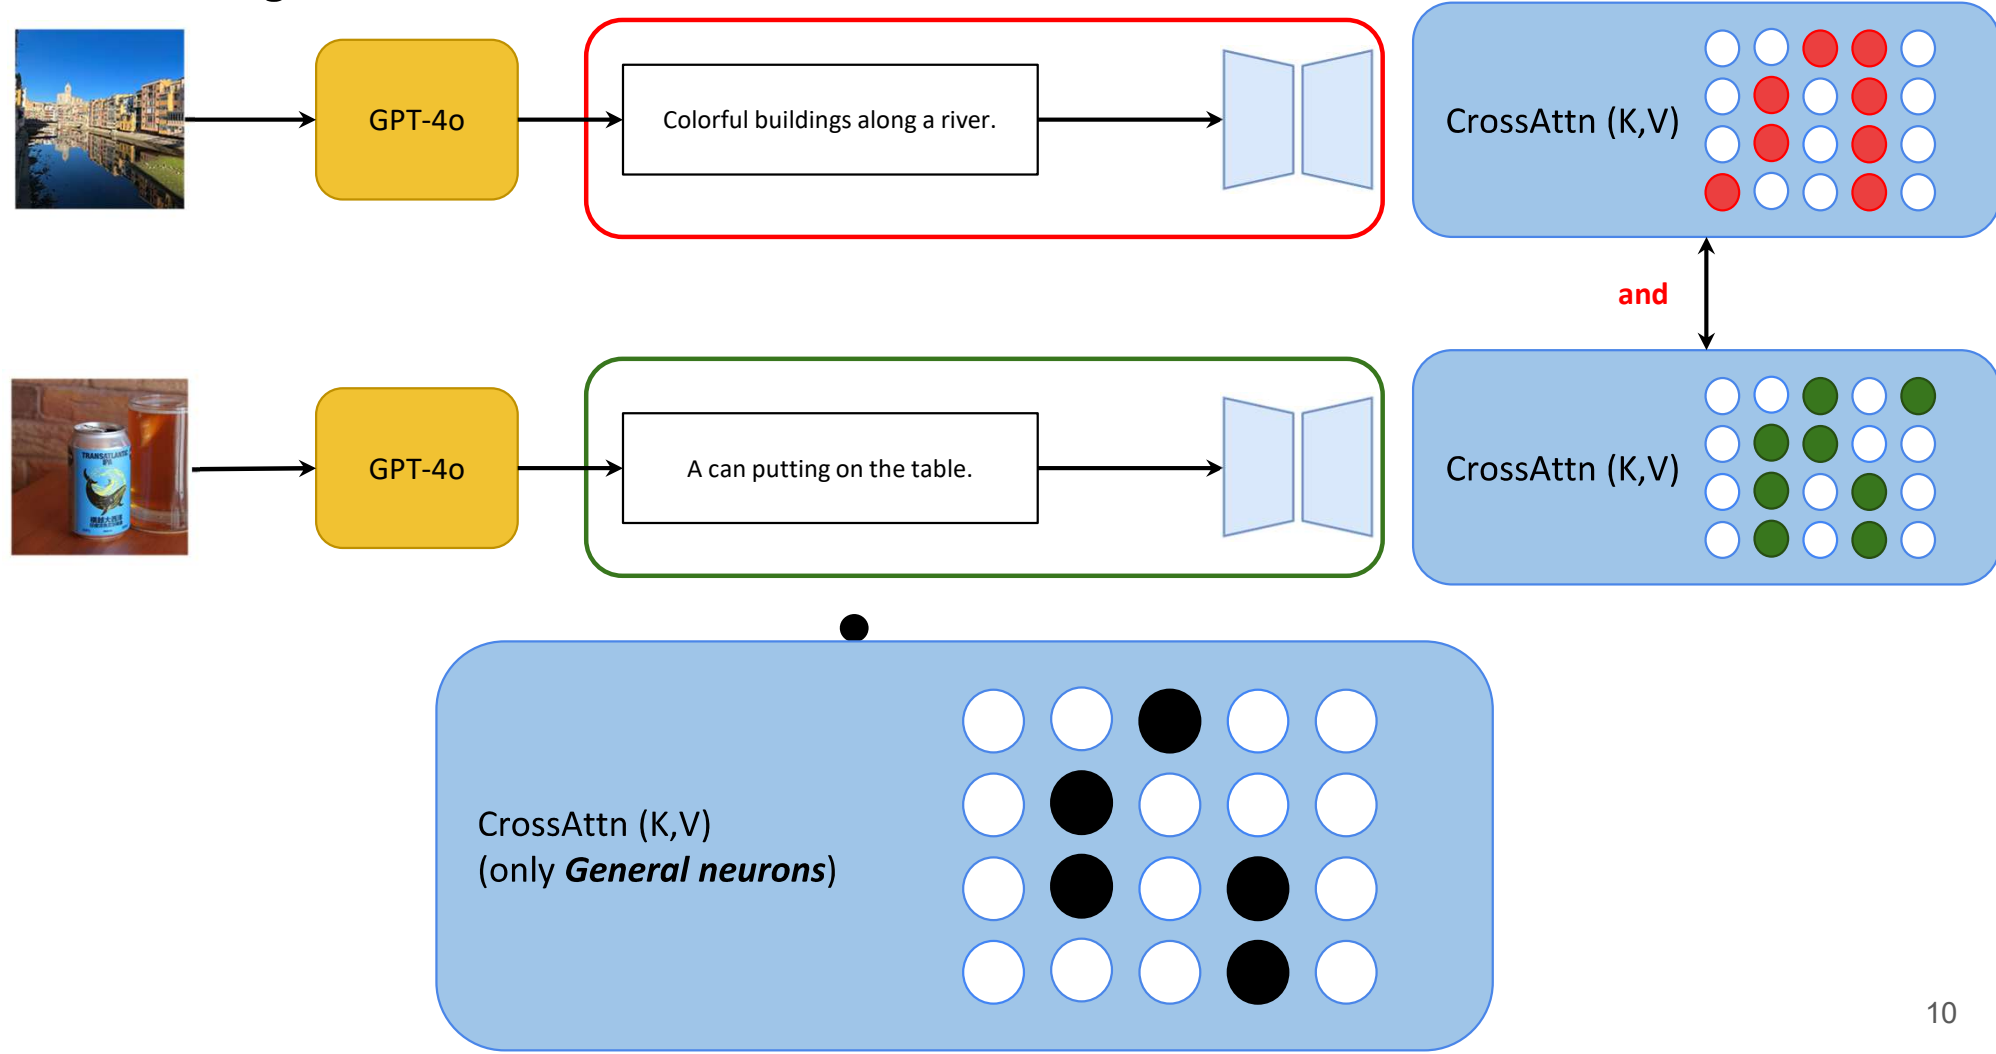

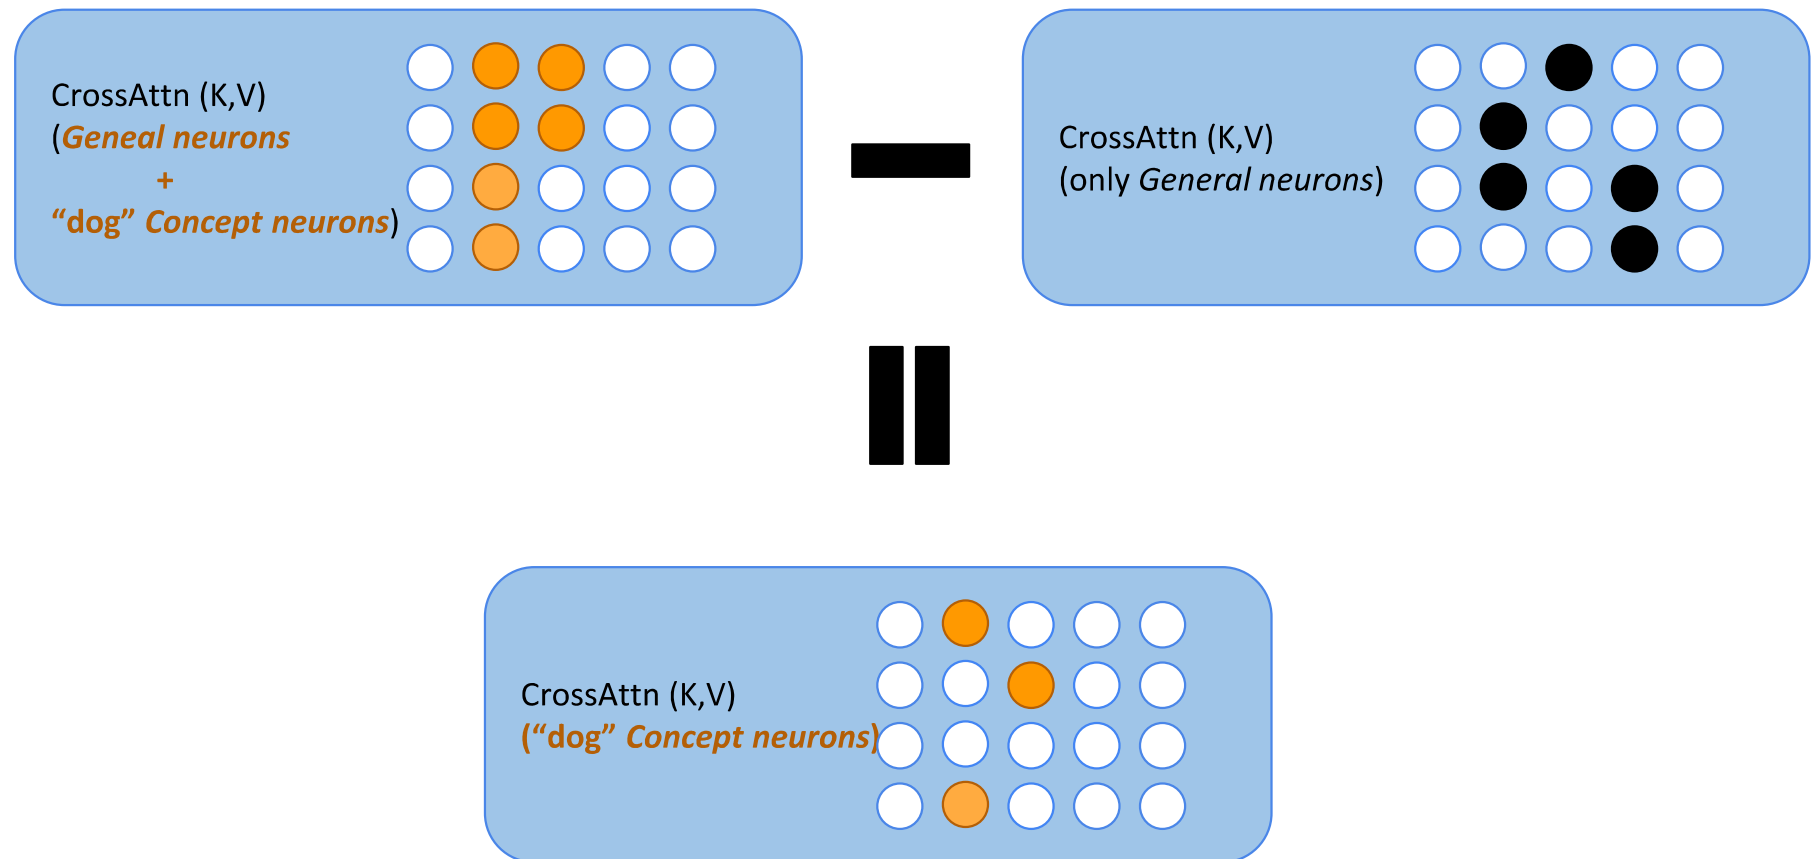

Calibration Image Set

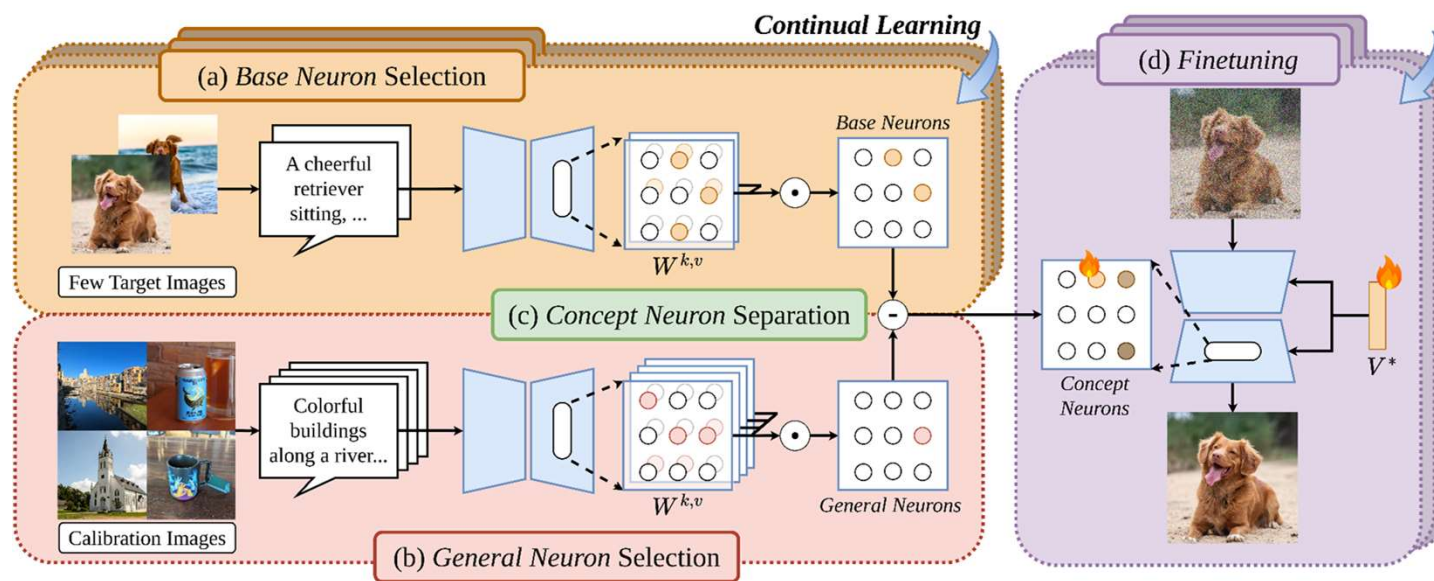

Calibration Image Set

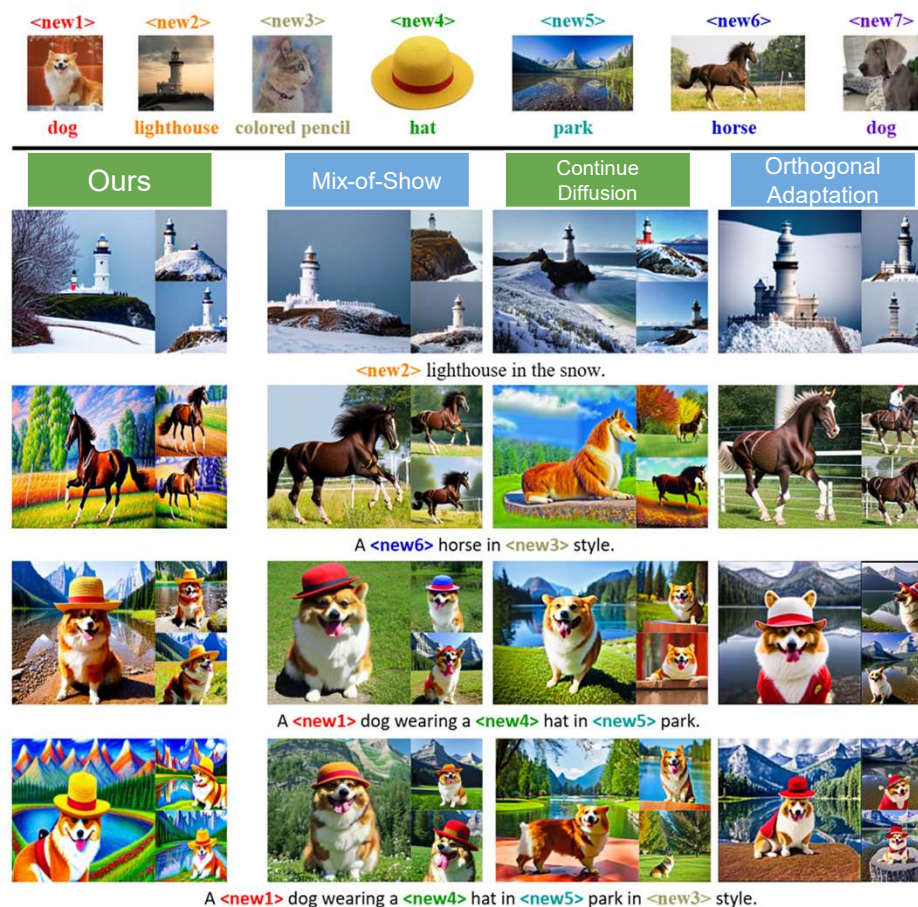

# Methods - Overview

- Find **Concept neurons** by excluding **General neurons** from **Base neurons**.
  - Finetune different **Concept neurons** for different concepts to prevent forgetting.

# Experiments - Qualitative Result

- For **continuously learning method**
  - Continuously learned 7 concepts.
- For **multiple concepts learned method**
  - Each concept learn a LoRA, and combined all 7 LoRAs.

## Experiment - Quantitative Result

Methods	Single Concept		Multiple Concepts		Computational Resources	
	CLIP-I $\uparrow$	CLIP-T $\uparrow$	CLIP-I $\uparrow$	CLIP-T $\uparrow$	Memory(MB) $\downarrow$	Time(s) $\downarrow$
Textual Inversion [11]	72.76	72.69	65.30	65.00	<b>0 / 0</b>	<b>0</b>
Custom Diffusion [18]	67.88	74.92	65.87	68.70	3547 / <b>0</b>	10
Mix-of-Show [13]	<b>75.86</b>	75.75	65.26	70.62	62852 / <b>0</b>	727
Orthogonal Adaption [27]	74.67	74.87	66.37	69.20	5663 / 3167	42
Continual Diffusion [32]	71.82	66.12	66.15	60.30	2461 / 4747	10
CNS	74.88	<b>76.95</b>	<b>67.21</b>	<b>79.22</b>	<b>0 / 0</b>	<b>0</b>

**Evaluation metrics** - *CLIP-I* and *CLIP-T* for the performance of the method,  
cost of *Memory* and *Time* for the efficiency of the method.

**Thanks for your attention!**
